Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Precast Concrete Parking Curbs competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Precast concrete parking curbs, also known as wheel stops or parking bumpers, are durable, pre-formed blocks made from concrete that are installed at the front of parking spaces. Their primary purpose is to prevent vehicles from rolling too far forward, protecting adjacent structures, pedestrians, and other vehicles. Because they are precast, these curbs are manufactured off-site in controlled environments, ensuring consistent quality and strength, and are then transported to the installation site. Precast concrete curbs are commonly used in parking lots, garages, and driveways, providing a cost-effective and low-maintenance solution for managing vehicle parking. In 2024, global Precast Concrete Parking Curbs production reached approximately 70.65 M?Units, with an average global market price of around US\$ 10.69 per?unit. The production capacity of precast concrete parking curbs is 105 million pieces, with a gross profit margin of about 20%. The upstream mainly includes cement, sand and gravel aggregates, mineral admixtures and admixtures, steel bars and mesh, mold steel molds or molds, surface coating materials, steam, electricity and sites, etc. The downstream is mainly for underground garages of housing construction and real estate projects, urban public parking lots, parking spaces on both sides of municipal roads, industrial parks and commercial complexes, etc. In the overall cost structure, direct materials account for about 40%-60%, and production labor, equipment depreciation, mold amortization and site depreciation account for 15%-25%. The Precast Concrete Parking Curbs market is experiencing steady growth, driven by increasing urbanization and the need for organized parking solutions. The market size is expanding as more commercial and residential developments incorporate these durable, low-maintenance curbs to enhance

parking safety and efficiency. Major sales regions include North America and Europe, where construction activities are robust, and regulations often mandate their use. The Asia-Pacific region is also seeing significant growth due to rapid urban development. Market opportunities are abundant, particularly in emerging markets and green construction projects. However, challenges such as fluctuating raw material costs and the environmental impact of concrete production may hinder market expansion.

The global Precast Concrete Parking Curbs market size was estimated at USD 755.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
