## Abstracts

The pre-adaptation training device is a kind of health auxiliary equipment that applies purely physical methods. It simulates the process of ischemic pre-adaptation to conduct repeated, short-term, non-invasive and non-harmful ischemic pre-adaptation training on the human body. This training can increase vascular elasticity, prevent myocardial infarction and cerebral infarction, improve sleep, make blood vessels smooth, promote blood circulation, and regulate blood pressure. The pre-adaptation training device is equivalent to a kind of remote ischemic pre-adaptation, which enables the body to maintain a relatively stable blood pressure level for a long time in a resting state, thereby preventing and treating hypertension.

The global Preconditioning Training Device market size was estimated at USD 385.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 17.30% during the forecast period.
