## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Precursor Delivery System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The precursor delivery system is a core subsystem in semiconductor manufacturing, used to safely and accurately deliver liquid or solid precursors (such as silane, TEOS, tungsten hexafluoride, etc.) to the chemical vapor deposition (CVD) or atomic layer deposition (ALD) reaction chamber. Precursor systems mainly refer to liquid delivery systems (LDS). The statistical scope of this article does not include supply systems for gas delivery (such as special gas cabinets, special gas racks, etc.). Precursor Delivery System is a device used to transport precursors. With the growth of downstream application demand for precursors, the growth of the Precursor Delivery System market has been further promoted. It is expected that by 2031, the market size will exceed 800 million USD. From the production side, the core production areas of Precursor Delivery System are mainly Europe, the United States, South Korea and Europe, among which Europe is the main production area, accounting for about 37% of the market share in 2024. There are still differences in the application, technology and product performance of Chinese Precursor Delivery System companies and international leading companies (such as Merck and Air Liquide) in the field of advanced processes. However, as the localization process of Chinese local manufacturers accelerates, some Chinese local companies have also gained a certain market share in the Precursor Delivery System market, such as Jiangsu Yoke Technology and PNC Process Systems Co., Ltd. In addition, in recent years, there have been many new entrants from Chinese local enterprises, such as Shanghai Wisdom Technology, etc., but at present, the scale is relatively small. With the development of China's semiconductor market in the future, it is expected that the global competitive share of Chinese local manufacturers will

gradually increase in the next few years, and China will maintain the fastest growth rate. With the advancement of domestic Precursor Delivery System technology, the emergence of cost advantages and the strengthening of policy support, it is expected that the share will exceed 25% in 2031. From the perspective of manufacturers, the core manufacturers of Precursor Delivery System worldwide mainly include Merck Group, Air Liquide, CSK, Foures Co., Ltd (Yoke Technology), PNC Process Systems Co., Ltd, etc. In 2024, the first-tier manufacturers in the world are mainly Merck Group and Air Liquide, and the first-tier manufacturers account for about 41% of the market share; the second-tier manufacturers include, CSK, Foures Co., Ltd (Yoke Technology), PNC Process Systems Co., Ltd, etc., with a total share of about 43%.

The global Precursor Delivery System market size was estimated at USD 497.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
