## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Prefabricated Ground Mesh competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Prefabricated Ground Mesh refers to factory-made, pre-welded or pre-knitted reinforcement panels using steel wires, fiberglass, or composites for ground stabilization, concrete reinforcement, erosion control, and infrastructure foundations. Produced in standardized grid patterns, they offer consistent strength and faster installation than on-site tying. The supply chain starts with raw materials like steel rods or fiberglass strands, processed in fabrication facilities through welding or knitting, then inspected, bundled, and distributed to construction sites. Applications include slabs, roadbeds, retaining walls, slopes, and utility works. Globally, the industry produces about 5.2 million tons annually with 6.5 million tons capacity, a 17% gross margin, and unit prices between USD 720?1,050 per ton depending on specifications.

The global Prefabricated Ground Mesh market size was estimated at USD 3948.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
