## Abstracts

Prefilled e-liquid pods are self-contained, disposable cartridges pre-filled with e-liquid that are designed for use with specific open or closed pod-based vaping systems, offering a convenient and user-friendly alternative to traditional refillable tanks or bottled e-liquids. These pods typically integrate a coil and wicking material within a sealed unit, eliminating the need for manual filling, coil priming, or maintenance, and are available in a wide variety of nicotine strengths, flavors, and formulations?including nicotine salts for smoother throat hits at higher concentrations. Designed for portability and ease of use, they appeal particularly to new vapers, former smokers seeking a simplified experience, and on-the-go consumers prioritizing discretion and hassle-free operation. The market encompasses both proprietary systems, where pods are exclusively compatible with a brand?s device, as well as universal or semi-universal options that work across multiple platforms, driving competition through compatibility, flavor innovation, and performance consistency.

The global Prefilled E Liquid Pods market size was estimated at USD 1250.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
