Abstracts

A preform soaking system is an integrated industrial equipment solution designed to condition plastic preforms—typically made from PET (polyethylene terephthalate)—by heating them uniformly to a specific temperature profile prior to blow molding. This process, often carried out via infrared ovens or thermal conditioning units, is critical for ensuring optimal material properties such as molecular orientation and structural integrity, which directly impact the quality, consistency, and production efficiency of the final container (e.g., bottles). These systems are engineered to handle high throughputs, minimize energy consumption, reduce material waste, and maintain precise thermal control, making them indispensable in beverage, food, pharmaceutical, and personal care packaging manufacturing lines where performance, hygiene, and scalability are paramount.

The global Preform Soaking System market size was estimated at USD 150.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
