Abstracts

Pregelatinized corn starch, also known as pregelatinized maize starch, is a modified starch derived from corn that has been pre-cooked and then dried to form a powder, which instantly thickens, gels, or binds when mixed with cold water without requiring further heating, making it a highly functional ingredient widely used across industries such as food and beverage (e.g., instant desserts, sauces, and ready-to-eat meals), pharmaceuticals (as a binder and disintegrant in tablets), and cosmetics (for texture and stability in creams and lotions). Its key properties include cold-water solubility, smooth texture, and consistent performance, offering advantages over native starches in applications requiring rapid hydration and convenience.

The global Pregelatinized Corn Starch market size was estimated at USD 880.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
