Abstracts

A preloaded piezoelectric actuator is a type of electromechanical device that utilizes the piezoelectric effect. It consists of piezoelectric materials, typically ceramic or crystal elements, which are preloaded under a certain mechanical force to ensure stable and efficient operation. When an electrical voltage is applied across these materials, they undergo precise and rapid dimensional changes, converting electrical energy into mechanical motion. This actuator is often used in applications demanding high precision positioning, such as in microelectronics manufacturing, optical instruments, and precision robotics, due to its ability to provide accurate and repeatable displacements at very small scales.

The global Preloaded Piezoelectric Actuator market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
