Report Overview

Premix poultry feed refers to a specialized blend of vitamins, minerals, amino acids, and other essential nutrients designed to be mixed with base feed ingredients (such as corn, soybean meal, and wheat) to form a complete poultry diet. It is a concentrated supplement that ensures balanced nutrition for poultry, promoting optimal growth, egg production, and overall health while preventing deficiencies. The premix typically contains trace elements like zinc, copper, manganese, and selenium, along with vitamins A, D, E, and B-complex, tailored to meet the specific requirements of different poultry species (broilers, layers, breeders) and growth stages. By standardizing nutrient intake, premix feed enhances feed efficiency, reduces waste, and supports biosecurity in poultry farming, making it a critical component in modern poultry production.
