Abstracts

The presbyopia contact lens is a type of contact lens designed exclusively to correct presbyopia. Presbyopia is a physiological phenomenon where, as age increases, the lens of the eye gradually hardens and loses elasticity, and the function of the ciliary muscle also diminishes, resulting in a gradual decline in the eye's accommodative ability and making it difficult to see objects up close. This contact lens employs a special multifocal or varifocal design, which differs from single-focus contact lenses by providing multiple distinct refractive zones on a single lens. This helps wearers achieve clearer vision when viewing both near and distant objects.

The global Presbyopia Contact Lenses market size was estimated at USD 455.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
