Report Overview:

This report studies the Press Fit Connector market. By their name, press-fit connectors are pressed through properly dimensioned plated-through holes on a printed circuit board (PCB). This technology is an alternative to the soldering method and offers a number of advantages over its more traditional counterpart. With press-fit connectors, you can eliminate a number of negative aspects that come along with soldering: thermal stress on the PCB, cold solder joints, shorts (caused by solder bridging), and the elimination of lead-free solder, which introduces its own set of problems. Press-fit connectors are also easily repaired, more environmentally friendly, and cost effective.

The Global Press Fit Connector Market Size was estimated at USD 6240.52 million in 2023 and is projected to reach USD 8315.23 million by 2029, exhibiting a CAGR of 4.90% during the forecast period.
