Report Overview

Press-on polyurethane tires are a type of industrial tire that is designed to be pressed onto a wheel or hub without the need for bonding or adhesive. These tires are commonly used in material handling equipment such as forklifts, pallet jacks, and other industrial vehicles. Press-on polyurethane tires are known for their durability, resistance to wear and tear, and ability to provide a smooth ride even on rough surfaces. They offer advantages such as high load-bearing capacity, low rolling resistance, and minimal maintenance requirements. These tires are suitable for indoor and outdoor applications in various industries such as manufacturing, warehousing, logistics, and distribution.

The market for press-on polyurethane tires is experiencing steady growth due to several market drivers. One of the key factors driving market growth is the increasing demand for material handling equipment in various industries such as e-commerce, automotive, food and beverage, and retail.
