Abstracts

Press through package (PTP) sheets have excellent properties of high moisture permeability, transparency and formability. They are mainly used for the packaging of tablets and capsules, and are widely known as a package configuration of having safety, stability and effectiveness and furthermore increasing the protection of the quality.

Market Size and GrowthThe global pharmaceutical packaging market, including PTP sheets, is growing steadily due to the increasing demand for medication safety, compliance, and convenience.

Competition LevelThe competitive landscape for PTP sheets is moderately high. Major global players compete for market share through technological innovation, cost-efficiency, and expanding product offerings.

Material InnovationsThere is increasing use of high-performance polymers (e.g., PCTFE, PVDC) to offer better barrier properties (against moisture, oxygen, light) to protect sensitive pharmaceutical products.

Advances in Drug FormulationsWith the advent of more sensitive drugs, biologics, and highly potent medications, the need for advanced packaging materials with better barrier properties has increased. PTP sheets, especially those with PVDC, PCTFE, or multilayer designs, provide excellent protection against moisture, oxygen, and light.

Convenience and Compliance in Patient MedicationBlister packaging, including PTP sheets, helps in dose accuracy and patient compliance by allowing for easy segmentation and dosage control. This is particularly important for elderly patients or those on multiple medications.

Recycling challengesMulti-layer packaging can be difficult to recycle, and this is increasingly becoming a concern for both manufacturers and consumers.

The global Press Through Package (PTP) Sheets market size was estimated at USD 1839.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
