Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Press Welded Grating competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Press Welded Grating production reached approximately 10,074 square meters, with an average global market price of around USD 35 per square meter. Press Welded Grating is a metal grating structure made by precisely press-welding load-bearing flat steel and crossbars using a high-voltage resistance welder. During its manufacturing process, the load-bearing flat steel is arranged in parallel at a set spacing, and the crossbars are vertically inserted into the pre-set notches of the load-bearing flat steel. These are welded securely under high temperature and high pressure to form a stable grid structure. Press-welded grating offers high strength, lightweight construction, ventilation and light transmission, and is slip-resistant and corrosion-resistant. The surface can be hot-dip galvanized, electro-galvanized, spray-painted, or polished to enhance durability and aesthetics.

The global Press Welded Grating market size was estimated at USD 353.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
