Abstracts

Pressed metal roof tiles are a durable and lightweight roofing material manufactured from steel or aluminum sheets that are coated, shaped, and textured through high-pressure forming processes to simulate the appearance of traditional clay or concrete tiles while offering enhanced weather resistance, longevity, and ease of installation. These products typically feature interlocking designs, corrosion-resistant finishes such as Galvalume or zinc-aluminum coatings, and are engineered to withstand extreme climatic conditions, including high winds, heavy rainfall, hail, and fire, making them a popular choice in both residential and commercial construction for their combination of aesthetic appeal, structural performance, and sustainability due to often containing recycled materials and being fully recyclable at end-of-life.
