Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pressed Wire Rope Rigging competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Pressed wire rope rigging refers to lifting and securing assemblies made by mechanically pressing steel sleeves or ferrules onto wire ropes to create strong, fixed-end terminations. This manufacturing method provides high strength, consistent performance, and reliable load-bearing capability, making pressed wire rope slings widely used in construction, shipbuilding, heavy machinery installation, mining, and logistics. Their durability, resistance to abrasion, and suitability for heavy-duty lifting make them an essential component in demanding rigging environments. The upstream segment of pressed wire rope slings includes the production and supply of steel wires, wire ropes, aluminum/steel sleeves (pressed ferrules), lifting eyes, shackles, and other metal components, as well as specialized machinery such as pressing machines and wire-rope end-forming equipment. The midstream segment is carried out by sling manufacturers, who perform wire rope cutting, assembly, pressing and securing of ferrules, quality inspection, and product certification to produce finished slings that meet various load ratings and industry standards. In 2024, global XXXX production reached approximately 169 kilotons, with an average global market price of around US\$ 2,632 per ton.

The global Pressed Wire Rope Rigging market size was estimated at USD 445.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
