Abstracts

Pressure Destoner is a device used to separate heavy impurities (such as stones, metal debris, etc.) from grain, seeds or other granular materials. The device uses the density difference of the materials to separate impurities from the main materials by adjusting the airflow and screen vibration. Compared with traditional destoners, pressure destoners can efficiently remove heavy foreign matter in a shorter time, ensuring the purity of the materials and the quality of subsequent processing. Pressure destoners are widely used in agriculture, food processing, seed processing and industrial raw material screening.

The global Pressure Destoner market size was estimated at USD 226.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
