Report Overview:

Pressure measurement film is a Mylar-based sensor film that reveals the distribution and magnitude of pressure between any two contacting, mating, or impacting surfaces.

Pressure measurement film can also be called as Pressure Sensitive Paper. It is a paper/film coated with an acid developer on the front and microcapsules containing a colorless cryptic dye on the back. When the paper is overlapped, the microcapsules are ruptured due to mechanical pressure, and the colorless cryptic dye overflows and then develops color when exposed to acid, then forming an image. These products are mostly used for pressure measurement.

The Global Pressure Measurement Film Market Size was estimated at USD 67.48 million in 2023 and is projected to reach USD 111.93 million by 2029, exhibiting a CAGR of 8.80% during the forecast period.
