Report Overview

Pressure relay is a hydraulic and electrical conversion element that uses the pressure of liquid to open and close electrical contacts. When the system pressure reaches the set value of the pressure relay, it will send an electrical signal to make the electrical components (such as electromagnet, motor, time relay, electromagnetic clutch, etc.) act, so as to relieve the pressure and reverse the oil circuit, realize the sequential action of the actuator, or turn off the motor to stop the system for safety protection.
