Abstracts

Cold laminating film is a type of protective film used to cover and protect printed materials without the need for heat. Unlike hot laminating films, which require heat to activate the adhesive, cold laminating films use a pressure-sensitive adhesive that bonds when pressure is applied. This makes them ideal for materials that could be damaged by heat, such as certain types of paper, inkjet prints, and delicate substrates.

The global Pressure Sensitive Cold Laminating Film market size was estimated at USD 288.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
