### Report Overview

A pressure sensor glow plug is a specialized type of glow plug used in diesel engines with pressure sensors. Glow plugs are used to heat the combustion chamber in a diesel engine during cold starts, aiding in the ignition of the fuel-air mixture. In some diesel engines, especially those equipped with pressure sensors, a pressure sensor glow plug is used. This type of glow plug not only provides the heating function but also incorporates a pressure sensor. The pressure sensor is designed to measure the pressure inside the combustion chamber. The pressure sensor glow plug works by heating up the combustion chamber, just like a regular glow plug. However, it also monitors the pressure inside the chamber during the heating process. This pressure information is then sent to the engine control unit (ECU) for analysis and adjustment of fuel injection timing and other engine parameters.
