## Abstracts

Pressure sensor IC is a miniature integrated circuit device that converts pressure signals into processable electrical signal outputs. It is widely used in the fields of automobiles, industrial control, medical treatment, consumer electronics, etc. It usually integrates pressure sensing elements, signal conditioning circuits, analog-to-digital converters, and temperature compensation modules to achieve high-precision measurement of gas or liquid pressure. In the automotive field, it is used in key parts such as tire pressure monitoring, engine intake pressure, and brake systems; in medical equipment, it can be used for blood pressure monitoring, respiratory equipment, etc.

**Market Trends** From traditional automobiles and industrial control to emerging fields such as medical equipment, consumer electronics, and smart homes, pressure sensor ICs are becoming an indispensable core sensing unit in various terminal devices. Especially in the automotive field, with the increase in the penetration rate of intelligent driving and new energy vehicles, the demand for high-precision pressure sensor ICs such as tire pressure monitoring, engine intake pressure, and battery thermal management continues to increase. At the same time, the maturity and cost reduction of MEMS micromechanical technology have promoted the development of sensor ICs in the direction of miniaturization, low power consumption, and high integration, making it easier to integrate into smaller and smarter devices.

**Market Disadvantages** The product technology threshold is high, especially in high-precision, high-stability, high-temperature and wide-band working environments, which puts forward strict requirements on chip design, packaging, compensation algorithms, etc., limiting the rapid entry of small and medium-sized enterprises into the market. Global core technologies are still mastered by a few leading manufacturers, such as Bosch, Infineon, TE Connectivity, etc., and domestic companies are still in the catching-up stage in the high-end market. In addition, MEMS manufacturing involves complex process flows and special equipment, with high initial investment costs and long

payback cycles, which have become the main barriers for new entrants. The problem of product homogeneity in the market is more prominent, and price competition is fierce, resulting in a compression of profit margins. **Market Outlook** With the integrated development of AI, edge computing and 5G, sensor ICs not only need to have perception capabilities, but also carry a certain degree of data processing and local intelligent judgment functions, thus evolving into "smart sensors". In the automotive field, the development of new energy vehicles and intelligent driving will promote the upgrade of pressure sensor ICs to high precision, fast response, wide temperature range and long life to meet the perception needs under complex working conditions; in terms of medical equipment, the rise of portable and wearable devices will also drive the demand for low-power, small-size, high-precision sensor ICs.

The global Pressure Sensor ICs market size was estimated at USD 1934.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
