Abstracts

A pressure sensor with display is an integrated device that combines a pressure transducer—which converts applied pressure into an electrical signal—with an embedded digital or analog display unit, providing real-time, local visualization of pressure readings. These devices typically measure various pressure types, such as absolute, gauge, or differential pressure, and are designed for applications requiring immediate on-site monitoring without external instrumentation. The display component is often complemented by features like programmable units (e.g., psi, bar, kPa), alarm settings, data logging, and sometimes connectivity options for data transfer, making the unit both a sensing and an interface tool in a single compact housing. Common in industrial, automotive, medical, and HVAC systems, these sensors enhance operational efficiency by offering user-friendly, instant feedback and reducing dependency on secondary readout systems.

The global Pressure Sensor With Display market size was estimated at USD 2850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
