Report Overview:

Pressure sensors are often called pressure transmitters, which convert pressure into analog electrical signals. Due to the existence of various types of pressure sensors on the market, the most common one is the basic strain gauge sensor. The transformation of pressure into electrical signals is achieved through the physical deformation of a strain gauge, which is bonded to the diaphragm of the pressure sensor and connected to a Wheatstone bridge structure. The pressure applied to the pressure sensor usually deflects the film, introducing strain into the gauge.

The Global Pressure Transmitters and Transducers Market Size was estimated at USD 2542.33 million in 2023 and is projected to reach USD 3626.80 million by 2029, exhibiting a CAGR of 6.10% during the forecast period.
