Abstracts

Pressurized steam cleaners are specialized cleaning devices that utilize high-temperature, high-pressure steam to sanitize, degrease, and remove dirt from a wide range of surfaces without the need for harsh chemical agents. These systems function by heating water to produce steam, which is then expelled at significant pressure through a nozzle or attachments, enabling deep cleaning and disinfection by loosening grime, killing bacteria, and dissolving residues. They are widely used in residential, commercial, and industrial settings for applications ranging from kitchen and bathroom sanitation to automotive detailing, textile care, and surface preparation. The technology is valued for its eco-friendly profile, efficiency in removing stubborn contaminants, and versatility across various materials, including tile, glass, metal, and upholstery.
