Report Overview

Printed Wiring Boards (PWBs) are essential components in electronic systems, serving as the foundation for mounting and interconnecting electronic components. They are typically made from a non-conductive substrate, such as fiberglass, with conductive pathways (usually copper) etched onto the surface. These pathways facilitate the flow of electrical signals between components, enabling the circuitry to function as intended. PWBs come in various forms, including single-sided, double-sided, and multi-layered boards, with each type offering different levels of complexity and functionality. They are crucial for the miniaturization and reliability of electronic devices, as they allow for the compact arrangement of components and the efficient transmission of electrical signals.
