Abstracts

Printing inks for food contact materials are specially formulated inks used in the printing and labeling of packaging materials and containers that come into direct or indirect contact with food products. These inks are designed to meet stringent safety and regulatory requirements to ensure that they do not transfer harmful substances to the packaged food, maintaining the food's safety and quality. Inks for food contact materials must comply with various food safety regulations and guidelines, such as those established by the U.S. Food and Drug Administration (FDA) and the European Food Safety Authority (EFSA). They should be formulated with materials approved for food contact. Key features and considerations of printing inks for food contact materials include: migration resistance, low odor and taste impact, fast drying, resistant to environmental factors, etc. They are used on various types of food packaging, including labels, flexible packaging (e.g., plastic films and bags), cartons, and containers. And they are a crucial component in ensuring that the food packaging industry complies with food safety regulations and meets consumer expectations for safe and well-labeled products. In recent years, with the promulgation of relevant laws in various countries and the market's growing demand for sustainable and safe packaging solutions, the market size of food contact material printing inks will continue to increase. Future market innovations may focus on environmentally friendly inks, such as water-based and bio-based formulations, to address environmental issues and regulatory pressures. Technological advances will improve ink performance and provide better safety, durability and functionality. As global regulations become more coordinated and consumer preferences shift toward transparency and sustainability, the market will continue to evolve to meet these needs and promote safer and more innovative packaging solutions.
