## Abstracts

Probenazole is a fungicide known for its high effectiveness in inducing disease resistance in plants. It is particularly effective against diseases like rice blast, white leaf blight, bacterial rice blight, and ear blight. It's used on various crops, including broccoli, cucumbers, lettuce, cabbage, and leeks, as well as on rice to prevent rice blast. Conditions such as low temperatures, lack of sunlight, and high humidity can heighten disease risk. However, probenazole is effective against these challenges. Initially developed for rice blast, probenazole has also proven effective against bacterial blights in cucumbers, cruciferous vegetables, leeks, etc. Its long-lasting pest control effect reduces labor and enhances early control efficacy. Rice plants absorbing probenazole exhibit resistance to all types of blast diseases, inhibiting infection.

The global Probenazole market size was estimated at USD 1930.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
