Abstracts

Procalcitonin (PCT) rapid test kits are in vitro diagnostic devices designed for the qualitative or quantitative detection of procalcitonin, a peptide precursor of the hormone calcitonin, in human blood, serum, or plasma samples, with results typically available within minutes to under an hour. These point-of-care or laboratory-based immunoassays utilize specific antibodies to identify elevated PCT levels, which serve as a critical biomarker for differentiating bacterial infections from other inflammatory conditions, aiding clinicians in decisions regarding antibiotic therapy initiation, duration, and stewardship, particularly in settings such as emergency departments, intensive care units, and primary care. The global market for these kits is expanding due to rising incidences of sepsis and bacterial infections, growing emphasis on antimicrobial stewardship programs, technological advancements enabling faster and more accurate testing, and increased adoption in both developed and emerging healthcare systems. Key drivers include the urgent need for rapid diagnostic solutions to reduce antibiotic misuse and combat antimicrobial resistance, supported by guidelines from health organizations recommending PCT testing for managing lower respiratory tract infections and sepsis. The market is characterized by the presence of established diagnostic companies and emerging players, intense competition focused on assay sensitivity, specificity, and ease of use, and a trend toward automation and integration with existing laboratory systems. Regional adoption varies, with North America and Europe leading in utilization due to well-established healthcare infrastructure and clinical guidelines, while Asia-Pacific shows high growth potential driven by improving healthcare access, rising infectious disease burdens, and increasing awareness of biomarker-based diagnostics. Challenges include cost constraints in low-resource settings, the need for more robust clinical validation across diverse patient populations, and regulatory hurdles; however, ongoing research into expanded clinical applications and the development of multiplex assays combining PCT with other biomarkers present significant future opportunities.

The global Procalcitonin Rapid Test Kit market size was estimated at USD 85.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
