Abstracts

Product Planning Software is a tool designed specifically for product managers and their teams to help plan, organize, and execute product strategy. It provides a range of features and tools to help product teams manage the entire product development process, from ideation to launch. Key features include product roadmap creation and management, using visual tools like Gantt charts and Kanban boards to clearly define key milestones, deadlines, and tasks. Product planning software will achieve deep integration with enterprise resource planning (ERP), customer relationship management (CRM), supply chain management, and other systems, breaking down internal information silos and enabling seamless integration and collaboration across business processes. For example, integration with ERP systems allows for consideration of production resource allocation and cost control during the design phase, while integration with CRM systems can precisely guide product development based on customer needs. Product planning software applications are primarily concentrated in discrete manufacturing sectors such as high-tech electronics, equipment manufacturing, and automobiles and auto parts, where competition is already intense. Process industries such as chemicals, pharmaceuticals, and food and beverages, while currently holding a smaller market share, are expected to see increased demand for product planning software as these sectors develop, becoming new growth areas.

The global Product Planning Software market size was estimated at USD 3420.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Product Planning Software market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging
