Report Overview

Prohexadione Calcium is a plant growth regulator belonging to the class of gibberellin biosynthesis inhibitors. Chemically, it is the calcium salt of 3-oxido-4-propionylcyclohexanecarboxylic acid, designed to restrict gibberellin production within plant tissues. By inhibiting this hormone pathway, it suppresses vegetative shoot elongation, enhances structural stability, and promotes balanced growth between vegetative and reproductive phases. Prohexadione Calcium is widely used to prevent lodging in cereals, improve fruit coloration and firmness in orchards, and enhance overall crop yield and quality. It is valued for its efficiency, environmental compatibility, and relatively low toxicity, which make it suitable for modern, sustainable agricultural practices.

The global Prohexadione Calcium market size was estimated at USD XX million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of XX% during the forecast period.
