Abstracts

Projection mapping systems, also known as spatial augmented reality or video mapping, are advanced projection technologies that use specialized software to warp and mask projected images so they can be precisely aligned with irregularly shaped surfaces, such as buildings, stages, or objects, effectively turning them into dynamic, animated displays. These systems integrate hardware?such as high-lumen projectors, media servers, and 3D sensors?with sophisticated real-time rendering software to create immersive visual experiences, often used in advertising, entertainment, art installations, and live events. Unlike conventional projection, which targets flat screens, projection mapping adapts visuals to complex geometries, enabling storytelling, brand activation, and architectural enhancement through precisely calibrated light and motion graphics.

The global Projection Mapping System market size was estimated at USD 220.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.75% during the forecast period.
