Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Prone Headrest competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of prone headrests will reach 8,785,700 units, with an average selling price of US\$31.16 per unit. A prone headrest is a specialized support device designed based on ergonomic principles, primarily used to distribute pressure and provide physiological adaptation to the head and face during the prone position. Its core features include: using elastic materials such as polymer gel, memory foam, or 3D mesh, and achieving dynamic pressure equalization through U-shaped, C-shaped, or adjustable modular structures, ensuring airway patency and preventing pressure ulcers. It is suitable for a variety of scenarios, including medical surgery (such as neurosurgery and prone positioning in ENT), rehabilitation nursing (such as prone ventilation for ARDS), daily office work and lunch breaks, and travel. It also incorporates a breathable and non-slip surface, removable and washable components, and multi-position adaptability, meeting the comfort and safety standards for all scenarios, from professional medical care to civilian leisure. Prone headrests have a gross profit margin of 13.92% and a gross profit of \$4.34. The single-line production capacity is 350,000-450,000 units/year.

The global Prone Headrest market size was estimated at USD 274.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
