Abstracts

Propane Gas Bottles contain liquid and gas, as propane liquefies under relatively low pressure. A propane gas bottle is considered low pressure versus high pressure cylinders, as used with CNG. High energy consumption resulting from rising energy demand from industrial and commercial end-uses is the major growth driver for the industry. A significant segment of the expanding global commercial end-use market is propane. The expanding hospitality industry in countries in the Middle East and Africa and Asia-Pacific region will bring huge global appeal for this end-use. Due to this happening, the demand is expected to increase over the next eight years. The federal government has increased manufacturing spending to meet growing demand from population growth and rapid industrialization in developing countries. However, the product is gaining popularity in industrialized countries and will offer considerable opportunities in developing countries before the end of the decade. In addition to being used as an energy source, it is also used as a raw material for the manufacture of propylene and ethylene. Furthermore, the growing popularity of the product in the commercial, agricultural, and residential sectors has prompted various legislative initiatives and restrictions regarding its safe use.

The global Propane Gas Bottles market size was estimated at USD 5228.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
