Abstracts

Propoxytetramethyl piperidiny dimethicone (henceforth PTMPD) is a unique, patented cationically-modified silicone described by its makers as a ?hindered amino functional silicone fluid.? It belongs to the same general category as other amine-functionalized silicones, such as amodimethicone and bis-aminopropyl dimethicone. These silicones have been modified by adding pendant groups suspended from the main silicone chain that contain organo-amine groups (-R-NH₂), which become positively charged in water due to electrostatic interactions. The result is a cationic polymer (positively-charged) that possesses many exceptional beneficial properties for use in hair and skin care applications.

The global Propoxytetramethyl Piperidiny Dimethicone market size was estimated at USD 350.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
