Report Overview

A propulsion system generally consists of an aircraft engine and some means to generate thrust, such as a propeller or a propulsive nozzle. A propulsion system must achieve two things. First, the thrust from the propulsion system must balance the drag of the airplane when the airplane is cruising. And second, the thrust from the propulsion system must exceed the drag of the airplane for the airplane to accelerate. In fact, the greater the difference between the thrust and the drag, called the excess thrust, the faster the airplane will accelerate.

This report provides a deep insight into the global Propulsion Systems market covering all its essential aspects.
