## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Propylene Glycol Ethyl Ether competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Propylene Glycol Ethyl Ether production reached approximately 1,240 kilotons, with an average global market price of around US\$ 1,200 per ton. Propylene Glycol Ethyl Ethers are a group of organic solvents derived from the reaction of propylene oxide with ethanol, resulting in mono-, di-, or tripropylene glycol ether structures. They are clear, colorless, and moderately volatile liquids with good solvency for both polar and nonpolar substances. Known for their high boiling points, low viscosity, and excellent coupling ability, they are widely used as coalescing agents and solvents in paints, inks, coatings, cleaning products, and chemical formulations. Their favorable balance of water solubility and organic solvency makes them useful in water-based systems, where they help improve flow, film formation, and drying performance.

The global Propylene Glycol Ethyl Ether market size was estimated at USD 1483.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
