Abstracts

Propylene glycol stearate is a non-ionic, lipophilic ester derived from the reaction of propylene glycol and stearic acid, primarily used as an emulsifier, stabilizer, and opacifying agent across various industries. It functions by reducing surface tension between immiscible substances, enabling the formation and maintenance of stable emulsions, particularly in water-in-oil systems. Valued for its smooth texture, conditioning properties, and ability to enhance product viscosity and shelf stability, it is commonly incorporated into cosmetics, pharmaceuticals, and food products?such as creams, lotions, ointments, and certain processed foods?where consistent texture, homogeneity, and aesthetic appeal are critical. Its chemical properties, including hydrophobicity and melting point, make it suitable for applications requiring moisture resistance or thermal stability.

The global Propylene Glycol Stearate market size was estimated at USD 245.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
