Report Overview

An prosthetic heart valve is a device implanted in the heart of a patient with valvular heart disease. When one of the four heart valves malfunctions, the medical choice may be to replace the natural valve with an artificial valve. This requires open-heart surgery. In 2018, North America is expected to dominate the prosthetic heart valve market, followed by Europe, Asia-Pacific, and the RoW. North America is also expected to register the highest CAGR during the forecast period. The large share and high growth in this regional segment can be attributed to factors such as the rapid growth in the aging population and prevalence of valvular heart diseases, favorable reimbursement scenario, and rising product approvals for heart valves are contributing to the growth of the North American prosthetic heart valve market.
