Abstracts

Protease free Bovine Serum Albumin (BSA) Lyophilized Powder is a high-purity biochemical reagent, with bovine serum albumin as its main component. It is obtained through a special process that removes impurities such as proteases contained in bovine serum albumin, followed by freeze-drying to produce a powdered product. This lyophilized powder has various applications, such as serving as a stabilizer in biochemical experiments to protect enzymes and other proteins from degradation and nonspecific adsorption; it also functions as a nutritional supplement in cell culture to promote cell growth and survival. In addition, due to its protease-free characteristic, protease-free BSA lyophilized powder is suitable for experiments involving the expression of proteins sensitive to protease activity.

The global Protease Free Bovine Serum Albumin Lyophilized Powder market size was estimated at USD 215.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
