Abstracts

Protein-free CHO media are chemically defined, serum-free culture media specifically designed for the cultivation of Chinese Hamster Ovary (CHO) cells in biopharmaceutical manufacturing. These media formulations eliminate animal-derived components, such as serum, and instead utilize recombinant proteins, peptides, hydrolysates, or fully synthetic ingredients to support cell growth and recombinant protein production. By omitting proteins, they reduce lot-to-lot variability, enhance process consistency, lower contamination risks, simplify downstream purification, and improve regulatory compliance, making them essential for scalable, efficient production of monoclonal antibodies, vaccines, and other biologics.

The global Protein Free Cho Media market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
