### Report Overview:

Protein ladders are used in experiments to estimate the size of proteins of interest and are resolved using gel electrophoresis. They are also known as protein markers, protein standards, or protein molecular weight markers. Protein ladders contain a mixture of highly purified proteins of defined or known molecular weights. They act as a point of reference for proteins during electrophoretic transfers in western blots. They have a broad range of applications in life sciences and biochemistry labs for protein analysis, such as understanding the functional roles and mechanisms of proteins and protein discovery.

The Global Protein Standard Market Size was estimated at USD 688.41 million in 2023 and is projected to reach USD 1193.20 million by 2029, exhibiting a CAGR of 9.60% during the forecast period.
