Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Proton Exchange Membrane Coating Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A proton exchange membrane coating machine is a high-end specialized piece of equipment used for the precision coating of proton exchange membranes (PEMs) or catalyst layers (CCMs) core materials for fuel cells. Through processes such as slot extrusion, micro-gravure coating, or spraying, it uniformly coats a nanoscale catalyst slurry (such as platinum-carbon ink) onto the base membrane, achieving high consistency, low defect rate, and continuous production with controllable thickness (typically 1-20 μm). Its upstream industry chain includes suppliers of high-precision metering pumps, coating dies, tension control systems, ovens, cleanroom environmental equipment, and slurry raw materials; the midstream consists of coating equipment manufacturers responsible for overall line integration and process adaptation; and the downstream directly connects with fuel cell membrane electrode assembly (MEA) manufacturers and hydrogen energy vehicle companies (such as Yihuatong, Re-Fire, Toyota, and Hyundai). This equipment has high technological barriers and is highly customizable, making it a key link in the localization of hydrogen energy equipment. With the accelerated development of green hydrogen and fuel cell vehicles globally, it is upgrading towards high precision, high speed, intelligence, and turnkey production lines. In 2024, the global production of proton exchange membrane coating machines reached 113 units, with an average selling price of US\$1,638.89 per unit and a gross profit margin of 50%.

The global Proton Exchange Membrane Coating Machine market size was estimated at USD 185.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 4.80% during the forecast period.
