Abstracts

Proton Exchange Membranes (PEM) is an important component used in solid polymer electrolyte fuel cells (Proton Exchange Membrane Fuel Cell, referred to as PEMFC). PEMFC is an efficient and clean energy technology widely used in transportation, household power systems and portable equipment. PEM is a type of electrolyte, usually a polymer membrane containing acidic functional groups. It has high electrical conductivity, high proton conductivity and chemical stability, while possessing sufficient mechanical strength and durability to perform well in fuel cells. In PEMFC, the proton exchange membrane plays a key role. It allows protons to be transferred between the anode and the cathode, prompting the oxidation reaction of hydrogen molecules on the anode to generate current and water. This electrochemical process makes PEMFC a clean and efficient energy conversion technology. Proton exchange membrane (PEM) is a membrane material with high ionic conductivity and low electronic conductivity, which is widely used in energy conversion devices such as fuel cells and water electrolysis. Its core function is to allow protons (hydrogen ions) to pass through while blocking electrons, thereby achieving effective transfer of current. The performance of this membrane directly affects the efficiency and life of fuel cells, and therefore plays a vital role in clean energy technology. With the advancement of materials science, researchers are constantly exploring new proton exchange membranes to improve their conductivity, temperature resistance and chemical corrosion resistance, thereby promoting the development of hydrogen energy and fuel cell technology. Global key players of Proton Exchange Membranes include Gore, Chemours, Asahi Kasei, AGC, Dongyue Group, etc. The top five players hold a share over 71%. Asia-Pacific is the largest market, and has a share about 43%, followed by North America and Europe with share 32% and 20%, separately. In terms of product type, Perfluorosulfonic Acid Membrane is the largest segment, occupied for a share of 61%. In terms of application, Fuel Cell has a share about 76 percent.

The global Proton Exchange Membranes (PEM) market size was estimated at USD 1518.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
