Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PS Light Diffusers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.In 2024, global sales of PS Light Diffusers reached approximately 310000 kg, with an average market price of about USD 218 per kg, an annual production capacity of roughly 400000 kg, and an industry-average gross margin of approximately 18%.PS light diffusers are transparent diffusion materials made from polystyrene (PS), widely used in LED lighting, liquid crystal display (LCD) backlighting, signage, and automotive lighting applications. Their primary function is to evenly distribute light sources, reduce glare, and enhance light efficiency and visual comfort.In the supply chain, upstream suppliers provide raw materials such as PS resin, optical additives, and antistatic agents; downstream consumers include LED lighting manufacturers, display panel producers, advertising companies, and automotive component suppliers.The cost structure is approximately 60% for raw materials, 20% for labor and equipment depreciation, and 20% for other expenses like packaging and logistics. Downstream consumption is influenced by factors such as the scale of the LED lighting market, shipments of LCD displays, and demand for signage.
