Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PTC Liquid Heater competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PTC Liquid Heater is an electrothermal conversion device based on positive temperature coefficient ceramic material, specially designed for heating requirements of liquid medium. The core principle is to use the resistance-temperature self-adjusting characteristics of PTC thermistor: at low temperature, the resistance is small, the current is large, and the temperature rises rapidly; when the temperature reaches the preset value, the resistance increases sharply, the current drops, and the automatic constant temperature is realized. These heaters achieve efficient and safe liquid heating through a hydro-electric separation structure and multi-layer heat conduction design.

The global PTC Liquid Heater market size was estimated at USD 715.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
