Report Overview:

PTC resettable fuses are a step-up from one shot fuses. When a short circuit occurs, they heat up and transition from a low resistance state to a high resistance state. Allowing them to cool down (typically by removing the power) resets them to the low resistance state. PTCs come in both ceramic (CPTC) and polymer (PPTC) types. Ceramic types are used in sensitive application spaces such as telecom where the resistance must not change much after tripping. The polymer type is used in many general electronics applications and is sometimes called alternatively a resettable fuse, or polyswitch.

The Global PTC Resettable Fuses Market Size was estimated at USD 382.06 million in 2023 and is projected to reach USD 486.22 million by 2029, exhibiting a CAGR of 4.10% during the forecast period.
