Abstracts

PTC self-recovery fuses, also known as resettable fuses or polymeric positive temperature coefficient (PPTC) devices, are overcurrent protection components that limit excessive current flow in electronic circuits by rapidly increasing their electrical resistance when an overcurrent condition occurs, effectively "tripping" the circuit open; once the fault is removed and power is cycled, they cool down and return to a low-resistance state, allowing normal operation to resume without requiring replacement, making them ideal for applications where manual intervention is impractical or where sustained protection with automatic recovery is advantageous, such as in consumer electronics, automotive systems, telecommunications equipment, and industrial controls.

The global Ptc Self Recovery Fuse market size was estimated at USD 450.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
