The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PTC Thermistor Resettable Fuse competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PTC Thermistor Resettable Fuse, commonly referred to as a PTC resettable fuse or polymeric positive temperature coefficient (PPTC) device, is an electronic component used to protect circuits from overcurrent conditions. Unlike traditional fuses, which need to be replaced after they blow, PTC resettable fuses automatically return to their normal state once the fault condition is cleared, offering a reusable and reliable means of circuit protection. In 2024 the production was 661.90 million units and the average price was \$2.1 per unit. PTC thermistor resettable fuses, based on polymeric positive temperature coefficient materials, are seeing sustained demand across consumer electronics, telecom equipment, automotive electronics and industrial power supplies due to their self-resetting capability and cost-saving maintenance; as electronics miniaturization, rising power densities, and stricter safety and efficiency regulations drive broader adoption, suppliers have clear opportunities to capture growth in high-demand segments such as data centers, electric vehicles, and 5G infrastructure by focusing on miniaturization, reduced resistance, and integration with smart monitoring features.

The global PTC Thermistor Resettable Fuse market size was estimated at USD 1390.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
