### Report Overview:

Endoscopic spine surgery can be perceived as a surgical approach utilizing micro-sized incisions (less than 1-inch) and minor tubular systems along with an endoscope to envision the surgical field. Whilst endoscopic surgical techniques are typically used to treat other areas of the body (for instance, gastrointestinal), advancements in optics, envisioning of tissues, and spinal imaging make ESS a surgical treatment alternative for several patients. The Endoscope is introduced through the working sleeve. With resection instruments, the herniated disc material is removed under direct vision. Confirmation of decompression & free neurological structures are confirmed under direct vision.
